External links References Bibliography Category:National days Category:National days Category:February observancesIdentification of novel SNPs in the HLA-DQA1 and DQB1 genes and association with multiple sclerosis in a Japanese population. The HLA class II gene region is a major susceptibility locus for multiple sclerosis (MS). To identify novel, non-polymorphic single-nucleotide polymorphisms (SNPs) in the HLA-DQA1 and

DQB1 genes, we designed a primer set to investigate the SNPs in the HLA-DQA1 and DQB1 genes. The SNPs were subsequently found in the HLA-DQA1 and DQB1 gene regions in Japanese patients with MS (n = 55), patients with other neurological diseases (OND, n = 65), and normal healthy controls (n = 158). In the control group, there was no significant difference in the allele distribution of the SNPs. The SNPs associated with

File di : Dokumen Ukl Upl.pdf Health risks of transgenerational exposure to environmental pollutants: applications to mercury and PCBs. Most pesticides in the United States and elsewhere are directly applied to the crop, which means they are taken up by the plant and are stored in the maturing fruit or seeds, or in the body of the plants and are passed on to offspring. Methyl

mercury, along with many other environmental contaminants, are stored in sperm and eggs. In some cases, the life cycle of the exposed organism is short-lived, so that effects may be seen in future generations. This review will discuss environmental contaminants to which human beings are exposed on a daily basis and on which children have been shown to be more sensitive to adverse health consequences. Placental transfer of these contaminants will be discussed, as well as the effects of maternal dietary factors and of exposure to dietary contaminants during pregnancy on the baby.

Q: Why did the programmer use "if" instead of "unless" in this ruby code? I was learning ruby and came across this code snippet

```
def whitelist_or_exit begin
  whitelist_service = WhiteListService.new(user,
  organisation)
  whitelist_service.use(self)
  rescue Exception => e if e.message ==
  "Whitelist failed. Please try again later"
  exit
end
end
end
```

Why did the programmer use if and not unless? Can't he have done this instead

```
def whitelist_or_exit unless
  e.message == "Whitelist failed. Please
```
